InvestAlign

AI-POWERED INVESTMENT INTELLIGENCE
FOR INDONESIA'S REGIONS

Indonesia's FDI Gap Is Structural — Not Economic

\$226B

Total ASEAN FDI in 2024

\$24B

Indonesia Share of ASEAN FDI

\$143B

Singapore Share of ASEAN FDI

53%

Market Share Gap Compared
to Singapore

ASEAN FDI Inflows 2024 (USD Billion)

FDI concentration is an information problem

Nearly 60% of Indonesia's FDI is **concentrated in only five provinces**, due to information asymmetry. While **514** regional offices exist, most regional opportunities remain **invisible** because they **lack investor-grade, accessible data**.

BKPM 2026 target: IDR 2,041.3T

BKPM faces an **IDR 1,542.5T gap** to meet its 2026 target. Top investor sources remain **Singapore, Hong Kong, China, US, Japan**. Success depends on diversifying beyond traditional Asian sources toward the **EU, GCC, and US manufacturing**.

The IDR 13,000T Growth Mandate

To meet **Bappenas' ambitious five-year target (2025–2029)**, Indonesia must secure over **IDR 13,000 trillion**, a massive leap from the previous decade. This growth scale makes legacy investors insufficient; success now mandates capturing **new FDI streams**.

The PIR Portal Exists — But It's Not Usable for Global Investors

BKPM's PIR portal (regionalinvestment.bkpm.go.id) already exists with **sector filters**, **location search**, **project data**, and a **partial English toggle**. **The gap:** it's not globally usable and not intelligent. **Foreign investors cannot act on it.**

Why BKPM Hasn't Solved This

STRUCTURAL

Fragmented Data Infrastructure

514 DPMPTSP offices lack unified schemas and APIs, causing data heterogeneity that prevents clean aggregation across 38 provinces.

JURISDICTIONAL

No authority over regional data quality

BKPM owns the PIR portal but cannot mandate data standards to regional DPMPTSP

CAPACITY

Most kabupaten lack digital staff

Regions struggle to provide investment-grade data, often delivering incomplete, outdated, or non-machine-readable formats like scanned PDFs.

INCENTIVE

Wrong success metrics for regions

Prioritizing investment realization over portal lead generation disincentivizes PIR data maintenance, making updates an optional overhead rather than a strategic priority.

How Other Countries Built Investor Discovery — and Where the Gap Is

India

Investment Grid (IIG)

indiainvestmentgrid.gov.in

- 5,000+ projects across 36 states & UTs, 25 sectors — filter by state, sector, investment size
- Proprietary recommendation algorithm based on investor's past selections & profile behavior
- \$220B+ cumulative investable opportunity

INDONESIA CAN GO FURTHER:

English only, not multilingual. Recommendation is behavior-based, not deep investor profile-matching. No geospatial zone scoring. No regulatory Q&A assistant.

Singapore

EDB Global Investor Programme (GIP)

edb.gov.sg/gip

- Residency-by-investment pathway for HNW individuals: min SGD 10M–50M depending on investment option
- 3 tracks: new/existing business (SGD 10M), GIP-select fund (SGD 25M), family office (AUM SGD 200M+)
- White-glove facilitation: interview-based process, sector eligibility assessment, ongoing compliance monitoring

INDONESIA CAN GO FURTHER:

GIP is an investor immigration program for ultra-HNW individuals, not a regional investment discovery platform. Not comparable to BKPM's mandate of attracting diverse foreign investment.

UAE

Abu Dhabi Investment Office (ADIO)

adio.abudhabi

- End-to-End Service: Streamlines company setup, regulatory approvals, and land access (Musataha) through dedicated government liaison.
- Targeted Clusters: Drives growth in high-tech sectors (SAVI, food/water tech, life sciences) via specialized infrastructure and financial incentives.
- Facilitates Golden Visas and manages multi-billion dollar IPO and venture capital funds (Ghadan 21).

INDONESIA CAN GO FURTHER:

Indonesia's investment landscape is fragmented across 514 autonomous offices; it needs an AI layer that bridges fragmentation rather than assuming centralization.

Vietnam

InvestVietnam Portal

investvietnam.vn

- Multilingual: English, Chinese (ZH), Japanese (JA), Korean (KO) — full, consistent site-wide translation
- Search across 46,198+ FDI projects, industrial parks, ready-built factories, M&A deals, local suppliers
- \$25.35B FDI disbursed in 2024 (+9.4% YoY), 147 source countries (Mekong Capital Jan 2026)

INDONESIA CAN GO FURTHER:

No AI profile matching. No geospatial zone scoring. No regulatory Q&A. Good multilingual coverage but still manual browse, not intelligent.

InvestAlign — An AI Intelligence Layer Built on BKPM's PIR

InvestAlign does not replace PIR. It wraps an **AI intelligence layer around existing BKPM data**, adding multilingual generation, intelligent investor matching, geospatial zone scoring, and regulatory Q&A. **BKPM retains full data ownership.**

TODAY (WITHOUT InvestAlign)		WITH InvestAlign
Foreign investor searches 'Indonesia manufacturing investment' → hits PIR homepage in Bahasa → gives up within 3 minutes.	→	Investor searches in English/Japanese/Korean → AI immediately surfaces top 10 matched projects based on their sector + budget profile.
No way to filter by investor type, sector, ticket size, or ESG preference. 38 provinces, zero personalization.	→	3-minute investor profile form → hybrid AI recommender returns ranked PIR opportunities with readiness score and fit explanation.
Project pages show province name only. No map, no infrastructure overlay, no logistics data, no SEZ status.	→	Interactive geospatial map with AI-scored zones: infrastructure, labor cost, distance to port, SEZ status, land availability — all visible.
Investor asks 'what permits do I need for a food processing plant in East Java?' → no answer. Must hire local consultant.	→	AI Regulatory Navigator (RAG) answers in their language: permit types, OSS checklist steps, timeline estimate, DPMPTSP contact.

How the AI Works — Input → Process → Output

01

NLP Translation & Structuring Engine

⚙️ LLM + domain-tuned NMT for investment terminology

INPUT:

Raw PIR data: HTML tables, PDFs, Bahasa text from 38 provinces. Inconsistent formats, missing fields, scanned docs.

PROCESS:

LLM extracts structured fields (sector, location, investment size, land status, readiness) + generates standardized EN/ZH/JA/KO summaries. Investment glossary prevents mistranslation of terms like 'hilirisasi', 'KEK', 'OSS-RBA', 'KBLI'.

OUTPUT:

Investor-grade project brief in up to 5 languages. Structured JSON for downstream modules. Completeness score flagging low-quality entries.

02

Investor Profile Matching Engine

⚙️ Hybrid Recommender: TF-IDF (content) + SVD Matrix Factorization (collaborative)

INPUT:

Investor 8-question profile: sector, sub-sector, ticket size (USD), entry mode (greenfield/JV/M&A), ESG, target geography, timeline. PIR project corpus (structured by Module 01).

PROCESS:

TF-IDF computes similarity between investor description and project text vectors. SVD learns latent patterns from interaction history. Weighted scoring combined with geospatial readiness score from Module 03.

OUTPUT:

Ranked Top 10 PIR opportunities: match score (0-100), fit rationale in investor's language, readiness tier (Ready / Development / Pipeline).

03

Geospatial Zone Intelligence

⚙️ XGBoost classifier + GIS (GeoPandas / PostGIS)

INPUT:

BIG geospatial data (tanahair.indonesia.go.id): DEM, land use, hazard zones. BPS infrastructure index per kabupaten. OSS SEZ registry. Historical BKPM FDI realization by location (ground truth for training).

PROCESS:

XGBoost trained on historical FDI outcomes per kabupaten (location features → investment materialization). Outputs investability score per zone. GIS overlays: infrastructure, logistics, port distance, power capacity.

OUTPUT:

Interactive map: color-coded investability zones. Drill-down per project: logistics cost estimate, land availability, nearest industrial estate, SEZ status.

04

AI Regulatory Navigator (RAG)

⚙️ RAG (Retrieval-Augmented Generation) on curated regulatory corpus

INPUT:

Investor question in any language. Knowledge base: OSS-RBA regulation, BKPM Reg 5/2025 (oss.go.id), KBLI codes, KEK rules, positive investment list, DPMPTSP contacts by region.

PROCESS:

Semantic search retrieves relevant regulation chunks → LLM generates accurate answer in investor's language. All answers cite specific OSS article / regulation number. KBLI suggestion based on business description.

OUTPUT:

Step-by-step permit pathway, estimated timeline, required documents list, DPMPTSP contact auto-routing. OSS pre-checklist auto-generated.

Who Uses InvestAlign — and What Happens When They Do

PRIMARY USER SEGMENTS

**Manufacturing Investors**
Japan, S.Korea, China — greenfield in EV battery, electronics, food processing. Need: location data, infrastructure readiness, incentive clarity.

**Institutional Investors / PE Funds**
Singapore, Hong Kong, US — sector funds & M&A targets. Need: English project briefs, financial feasibility, standardized assessments.

**Renewable Energy Developers**
EU, Middle East — EBT/solar outside Java. Need: geospatial readiness data, regulatory pathway for energy sector, land status clarity.

**DPMPTSP (514 Regional Gov.)**
Regional investment offices — receive AI-routed investor inquiries, track interest in their provinces, improve PIR data quality.

INVESTOR JOURNEY — 5 STEPS TO DEAL-READY

1

DISCOVER (0 min)
Lands on InvestAlign in their language (EN/ZH/JA/KO/AR). Sees curated sector highlights + 'Find My Match' CTA.

2

PROFILE (3 min)
8-question profile: sector, ticket size (USD), entry mode, ESG, geography. AI builds investor preference vector.

3

MATCH (<1 min)
AI recommender returns Top 10 ranked PIR projects with match score, region, readiness tier, and rationale.

4

EXPLORE (10 min)
Geospatial map: zone investability score, infrastructure index, port distance, land status, incentives, feasibility link.

5

NAVIGATE (5 min)
RAG answers 'what permits for [sector] in [region]?' → OSS checklist generated + DPMPTSP contact auto-routed.

Built on Data That Already Exists — All Sources Verified & Accessible

Indonesia Reality Check: 5 of 6 required datasets are publicly accessible today. InvestAlign's AI handles normalization of fragmented, inconsistent, and multi-format regional data.

PIR — Potensi Investasi Regional

Available

Owner: BKPM

Use: Primary corpus — NLP structuring + investor matching engine. Has sector filter, location filter, project cards with IRR/payback.

regionalinvestment.bkpm.go.id

Satu Data BKPM — Realisasi Investasi

Available

Owner: BKPM

Use: Historical FDI data — training ground truth for XGBoost geospatial zone scorer. Quarterly data, 2024.

data.bkpm.go.id

OSS — Online Single Submission Corpus

Available

Owner: BKPM / Kemenko Perekonomian

Use: RAG knowledge base — Regulatory Navigator module. KBLI codes, permit pathways, investment positive list.

oss.go.id

Geospasial DEMNAS — BIG Indonesia

Available

Owner: Badan Informasi Geospasial (BIG)

Use: GIS layers — XGBoost geospatial zone scoring per kabupaten. Land use, hazard zones, infrastructure.

tanahair.indonesia.go.id

BPS — FDI & Macro Indicators by Province

Available

Owner: BPS Indonesia

Use: Feature enrichment + validation dataset for geospatial zone scoring model.

bps.go.id/en/statistics-table/2/MTg0MyMy

Hilirisasi — Presidential Priority Sectors

Coordination

Owner: BKPM / Kemenko Marves

Use: Weighting layer — recommender scoring aligned to 17 presidential programs + 8 PHTC quick-win sectors.

bkpm.go.id/en/info/press-release

How It All Connects — and What It Delivers

SYSTEM ARCHITECTURE — 3 LAYERS

EXPECTED IMPACT — QUANTIFIED

+15–25% FDI Inquiry Conversion

From passive browse → AI-matched lead pipeline. Basis: IIG recommendation engine vs. static browse (indiainvestmentgrid.gov.in/faqs).

6× Regions Discoverable to Investors

From ~5 provinces receiving 60%+ FDI → 30+ regions with AI-structured multilingual profiles. Basis: ARC Group FDI distribution 2024.

–70% Time to First Investor Contact

From 3–5 days manual research + consultant → under 2 hours via platform + RAG navigator.

30+ DPMPTSP Connected via AI Routing

From zero automated routing → AI matches investor inquiries to the correct regional DPMPTSP. Pilot target: Wk 7–8.

8-Week Incubation Roadmap

TIMELINE

Week 1–2 Data Foundation • Ingest PIR from 3 pilot provinces (West Java, Central Sulawesi, East Kalimantan) • Set up AWS infrastructure (EC2, RDS, S3) • Build NLP extraction pipeline on PIR data • Ingest BPS + OSS regulatory corpus	Week 3–4 AI CoreModules • LLM translation layer (EN + ZH + JA) • Investor profile form + TF-IDF recommender v1 • XGBoost zone scorer for 3 pilot provinces • RAG chatbot on OSS regulatory corpus	Week 5–6 MVP Interface • Web portal in 3 languages (EN, ZH, JA) • Interactive geospatial map view • AI Chat widget (Regulatory Navigator) • BKPM admin dashboard for data quality	Week 7–8 Pilot & Demo Day • Real investor user testing (5–10 pilot users) • KPI measurement: match quality, session time, inquiry rate • Impact documentation for BKPM evaluation • Demo presentation: regulator + investor panel
---	---	---	---

RISK & MITIGATION

PIR data quality varies by province	Start with 3 provinces with best DPMPTSP data. AI normalization handles format gaps. Add provinces incrementally.
LLM hallucination in regulatory Q&A	RAG enforces mandatory citation of OSS article/regulation number. Human review flag for ambiguous queries in pilot.
Government data coordination	Public PIR scraping + open BPS API + public OSS corpus covers 80% of MVP needs. Zero blocking dependencies.

TEAM PROFILE

	Salma Kurnia Dewi Product Manager Ensures InvestAlign solves the right problem, for the right users, within the right constraints.
	Patrick Samuel Evans Simanjuntak Tech Lead Builds and owns the AI intelligence that turns raw PIR data into investor-grade insights
	Mariano Gerardus Senduk Engineer Makes the AI accessible — building the interface, map, and dashboard that investors and BKPM actually use.
